

Exercise 6 - Union & Union All

Bonus Questions

Bonus 01

- I would use Union,
- Because it will provide a unique list of customers while considering both January and February and If there are duplicate customers on the respective months they would only appear once.

Bonus 02

- ~~Union~~ I would use Union All
- Because every transaction of every individual is required and even if there are duplicate transactions of the individual they would all appear.

Bonus 03

- The column city is missing in the table 1 query as both queries of the tables must have the same columns.
- I would fix it by either including the city column in table 1 query as well, or I would exclude the column city from both table queries.
